

PAW3902JF-TXQT: Optical Motion Tracking Chip

Product Datasheet

General Description

The PAW3902JF-TXQT is PixArt Imaging's latest improved low light performance optical motion tracking chip designed to a wide working range of 80 mm to infinity. Its latest state of the art architecture allows motion tracking under low light condition of down to 30 lux. In addition, a dedicated super low light mode is designed for motion tracking at single digit lux which is suitable for low speed super low light hovering stabilization function. It is housed in a smaller form factor of 14-pin land-grid-array (LGA) package and is most suitable for far field application for motion detection, e.g Drone.
